CLIENT	DATE	VISIT TYPE	MODALITY	SUGGESTIBILITY	DURATION
Deepak S.	2026-10-01	Initial Consultation (#1)	Zoom (Virtual)	76% Physical	~60 min

Issues Addressed

Sleep disturbance: poor deep sleep quality despite adequate hours (8+ hrs), low depth score ("Bad"), high light sleep proportion, daytime fatigue

Assessment: Client presents with chronic light-sleep dominance. 76% Physical suggestibility indicates direct/literal approach optimal. Engineering background suggests systematic, evidence-based framing will enhance compliance. No psychiatric contraindications. Good candidate for structured 6-8 session protocol.

DEPTH SCORE

Techniques Used

Suggestibility assessment (ABS), Theory of Mind education, Eagle arm-raise induction, Progressive relaxation, 4-7-8 breathing technique, First trance experience (orientation session)

Post-Hypnotic Suggestions (Pending — Installation in Session 2)

Session 1 was cognitive assessment + first induction experience. The post-hypnotic suggestions below are scheduled for installation in Session 2 (The Installation Session), where each will be systematically anchored in deep trance with ideomotor confirmation.

- 1. **Sorting Room:** Subconscious processing team files daily experiences during deep sleep
- 2. **Depth Dial:** Controls depth of sleep processing (Surface to Delta Lock)
- 3. **Delta Floor:** 3-hour uninterrupted deep sleep lock
- 4. **Settling Pond:** Day's impressions settle naturally — no effort required
- 5. **Island Cabin:** Permanent healing sanctuary for sleep
- 6. **Pillow Trigger:** Head on pillow + 4-7-8 breathing = automatic sleep onset
- 7. **Night-Waking Reset:** Hand on chest + one breath = back to deep sleep in 60 seconds
- 8. **10:30 PM Time Anchor:** Nervous system begins shutdown sequence automatically
- 9. **Venting Dream Activation:** Vivid dreams = brain clearing its backlog
- 10. **Tracker as Convincer:** Rising deep sleep % reinforces the programming each morning

Treatment Plan

Sessions: 6-8 (6 core + 2 contingency, reassessed at session 4)

Frequency: Every 1-2 weeks

Approach: Clinical hypnotherapy, Physical suggestible lane (direct/literal), progress-driven with subjective + clinical measures

Session 1: Assessment + Education + First Induction Experience

Session 2: THE INSTALLATION — 10 post-hypnotic suggestions anchored in deep trance with ideomotor checks

Session 3: Maintenance + Reinforcement (Depth Anchor Chain, Processing Vault, Auto-Pilot)

Session 4: Independence Pivot — self-hypnosis taught, client runs ceremony alone

Sessions 5-6: Fine-tuning / Graduation

Sessions 7-8: Contingency (only if needed)

#	FOCUS	KEY TARGET	STATUS
1	Assessment + First Experience	Baseline	Done

2	The Installation	10 PHS anchored	Upcoming
3	Maintenance + overactive mind	Night-waking ease	Upcoming
4	Self-hypnosis independence	Self-directed	Upcoming
5	Fine-tuning	Effortless onset	Upcoming
6	Graduation	All goals met	Upcoming

Progress Indicators

HOW WE MEASURE	WHERE YOU STARTED	WHAT IMPROVEMENT LOOKS LIKE
How you feel waking up	4/10 (exhausted)	7-8/10 (refreshed, rested)
Falling asleep	Difficult (~35 min)	Natural, effortless
Night-waking	Frequent, hard to return	Rare, returns easily
Daytime energy	Low, persistent fatigue	Consistent throughout day
Ceremony compliance	Starting	Effortless habit
Self-hypnosis confidence	Not yet learned	8+/10 (fully independent)

Progress is measured through your subjective experience and clinical observation. If you use a personal sleep tracker, that data is for your own awareness — therapy outcomes are not determined by device readings.

Client Responsibilities

Treatment outcomes depend on daily home practice between sessions.

NIGHTLY SLEEP CEREMONY (10:30 PM)	FREQ	DONE
Time-box: screen off by 10:00, bedroom by 10:20	Daily	
4-7-8 Breathing: 3 cycles in bed	Daily	
Settling visualization: gold dust in still water	Daily	
Dream journal: record any dreams on waking	Daily	

- Attend all scheduled sessions (reschedule with 24-hour notice)
- Bring sleep data to each session (check every 3-4 days, note how you feel)
- Maintain consistent bedtime within 30-minute window (10:30 PM)
- No alcohol as sleep aid (disrupts deep sleep architecture)
- Report new symptoms, medication changes, or concerns promptly

Client-Reported Outcomes

First night after session: 11 PM to 7:33 AM (8.5 hours, one bathroom wake). Client reports feeling "more aware of sleep patterns." Willing to commit to sleep ceremony. Engaged and asked technical questions about brain wave states.

Next Steps

Next Session: Session 2: The Installation Session (60 min)

Schedule at: calendly.com/jeeth-vrishi/hypno/90min

If sleep deteriorates significantly, you experience persistent anxiety, panic, or suicidal thoughts, or develop new physical symptoms — contact your primary care physician immediately.

SB 577 Disclosure: Jithendran Sellamuthu is not a licensed physician, psychologist, or psychiatrist. Services are provided for vocational/avocational self-improvement under CA B&P Code §2908. Not a substitute for medical/psychological treatment.

No Guarantee of Outcomes: While clinical research supports hypnotherapy for sleep improvement (Cordi 2014, Chamine 2018, Lam 2015), individual results vary based on suggestibility, compliance, and health. VRishi Hypnotherapy does not guarantee specific outcomes, cure rates, or timelines. Progress indicators are research-based targets, not promises.

Therapeutic Exclusions: Clients on anti-depressant, anti-psychotic, or anti-anxiety medications, or with psychiatric history/suicidal ideation, must be referred to licensed mental health professionals.

Liability: Professional liability coverage maintained. Details available upon request.

Confidentiality: All information kept confidential per HIPAA Privacy Rule (45 CFR §§160, 164) and CA law, except where disclosure required by law.
