SESSION 2b RUNBOOK: CORE SLEEP INSTALLATIONS

DS-001 (Deepak S., 56, 76% Physical) | Date: Oct 15, 2026 | Zoom | **THERAPIST ONLY**

GATE CHECK: Recording software ready? START RECORDING at Step 4. This session's audio goes to the client. RECORD.

STEP 1: CHECK-IN + FEEDBACK REVIEW + RITUAL DEMO

15 MIN

Deepak's feedback (Oct 14): Morning restedness 3/10 (baseline 4/10 — slightly worse). Sleeping longer but still tired. Sleep onset mixed (2 easy, 2 difficult, 2 medium). No night-waking (was waking once for bathroom). No anxiety at night. Not worried about next-day tasks. Overall quality 3/10. BUT: "Maybe I am doing it wrong." "Unsure of self-hypnosis step." 3 of 6 homework items skipped. "Somewhat" ready. Was traveling (disrupted routine).

SAY: "Deepak, welcome back. I read your feedback form. Let me tell you what jumped out at me."

SAY: "First — you reported no night-waking at all this week. Before, you were getting up once or twice during the night. The fact that you are sleeping through tells me the Depth Dial is holding. That is a positive sign."

SAY: "Second — you said you are not worried about next-day tasks and you had no anxiety at night. That means the journaling is clearing the cognitive queue. Even doing just the first two stages made a difference. That is the subconscious responding."

SAY: "Third — you mentioned you might be doing it wrong because you still feel tired in the morning. I want to be direct with you. You are NOT doing it wrong. Here is what is happening: the Depth Dial gets you TO delta sleep, but your body is not yet staying in deep restorative sleep long enough. That is what we fix today. The Island Cabin is your permanent sleep sanctuary — it adds the restorative layer. The Pillow Trigger automates the whole sequence so you do not have to remember anything. After today, the morning tiredness should start shifting."

ASK: "You mentioned the traveling disrupted your routine. That makes sense — different bed, different settings. Now that you are back home, how was sleep last night?"

ASK: "You said morning restedness was 3 out of 10 — that is actually slightly lower than before. Let me ask: are you sleeping longer but still waking tired? Or is the quality itself different?"

ASK: "Any tracker data from the last few days?"

RECORD: Sleep quality: ___/10. Night-waking: still none? Onset: ___. Tracker data: ___

SAY: "Here is what is happening. The Depth Dial is installed and it is keeping you in sleep through the night. But getting TO delta and staying IN restorative delta are two different things. Right now you are reaching delta but your body is not extracting the full restoration from it yet. Today we install the Sorting Room, which processes your day's data silently. The Settling Pond, which quiets the mental chatter. The Island Cabin, which is where the deep cellular repair happens. And the Pillow Trigger, which automates the entire sequence. After today, you turn the key and the whole system runs."

SAY: "Let me also set expectations. The morning tiredness will improve as we stack more installations. The Depth Dial alone gets you TO delta, but the Pillow Trigger — which we install today — is what gets you there FASTER. And the Island Cabin is what makes the sleep RESTORATIVE, not just deep. After today, those three work together."

SAY: "Before we go into trance, let me quickly walk through the full nightly ritual so you know exactly what to do. I want to make sure you are clear on every step."

SAY: "Step 1: 10:00 PM — Open your journal. Write what happened today, what is planned tomorrow, and any unresolved items. You have been doing the first two — add the third. Write the plan to handle each open item, then close the journal. Physically shut it. That closure is the signal."

SAY: "Step 2: 10:20 PM — Tension release. You know this one. Fists, shoulders, face. Fifteen seconds."

SAY: "Step 3: 10:25 PM — In bed. Three cycles of 4-7-8 breathing. While you breathe, close your eyes and find the Depth Dial. Turn it down: Surface, Shallow, Medium, Light, Deep, Delta Lock. Click."

SAY: "Step 4: 10:30 PM — After today, the Pillow Trigger takes over. You will not need to think. Head on pillow, the system runs."

ASK: "Does that sequence make sense? Anything unclear?"

SAY:

SLEEP APNEA SCREENING (ask before trance):

PRE-SESSION: Deepak confirmed (1) diagnosed sleep apnea, (2) tried CPAP but it made things WORSE, currently no treatment, (3) 3-4 years of poor sleep, multiple specialists, recommended weight loss but unable to achieve.

SAY: "Deepak, thank you for being upfront about the sleep apnea. I want to address this directly because it changes how we think about our work together."

RECORD: CONFIRMED: Sleep apnea diagnosed. CPAP tried, made it worse (discontinued). No current treatment. 3-4 years poor sleep. Multiple specialists. Weight loss recommended but unable to achieve.

SAY: "You have been dealing with this for three to four years. You have seen multiple specialists. You tried the CPAP and it made things worse. I hear that. That is frustrating. So let me be clear about what we CAN do and what we cannot do. What we are doing with hypnotherapy addresses the behavioral and cognitive side of sleep — the mental hyperactivity, the difficulty winding down, the routine. And it is working — you are sleeping through the night, the journaling is clearing the queue, and the Depth Dial is getting your brain toward delta."

SAY: "But sleep apnea is a physical condition. When the airway partially closes during sleep, your brain micro-wakes to restart breathing. You do not remember these, but they prevent your body from getting the full restorative benefit of deep sleep. That may be why you still feel tired in the morning even though you are sleeping longer."

SAY: "Our work helps your brain WANT deep sleep and get there faster. And that IS happening — you are sleeping through the night now. But the morning tiredness may be because even when your brain reaches delta, the apnea events are disrupting the restorative quality. That is a physical issue, not a willpower issue and not a hypnotherapy issue."

SAY: "Since the CPAP did not work for you, there are other options worth exploring: oral appliances are different from CPAP and many people who cannot tolerate CPAP do well with them. Positional therapy — sleeping on your side instead of your back — can reduce apnea events. And the nasal breathing and jaw headband we discussed are partial helps."

SAY: "There is also something we CAN do together on the weight side. Hypnotherapy for weight management is a real application. If the specialists say weight loss would help the apnea, and you have been unable to achieve it through willpower alone, that is exactly the kind of subconscious pattern we can address. Something

to think about for after we finish the sleep program."

SAY: "Now I also want to plant a seed. There are three things we can work on together, not just one."

SAY: "Track one is what we are doing now — sleep behavior. The Depth Dial, the installations, the ritual. This is already showing results."

SAY: "Track two — and this is new — there is emerging research on using hypnotherapy to help people who could not tolerate CPAP retry it successfully. The idea is that we desensitize the anxiety and discomfort around the mask in trance, build positive associations, and then you try it again. Not today, but it is something to consider."

SAY: "Track three is weight management. Your specialists are right that weight loss would help the apnea. But here is the catch-22 — the apnea is disrupting your cortisol and hunger hormones, which makes weight loss biologically harder. It is not a willpower problem. Hypnotherapy can address the behavioral side — emotional eating, stress snacking, late-night cravings. It is not a magic solution, but combined with a structured plan, the research shows it helps."

SAY: "We do not need to start all three today. Today is about completing the sleep installations. But I want you to know the full picture of what is available."

SAY: "Bottom line: what we are doing IS working on the mind side. The installations we put in today will make your sleep onset faster and your routine automatic. The morning restedness improvement depends on addressing both layers — and I want you to have realistic expectations about that. Deal?"

SB 577 compliance: not diagnosing or treating sleep apnea. Disclosing limitation of scope and recommending medical referral. Required.

SAY: "Good. Now let us install the five programs that make this automatic. Questions before we begin?"

STEP 2: PHS RE-ENTRY INDUCTION

5 MIN

DO: Start timer NOW.

SAY: "Raise your arm. Palm in front of your face. Stare at your middle finger. Deep breath."

SAY: "Fingers separating. Separating, wider and wider. Hand moving toward your forehead. With every breath, closer. Magnetic pull drawing hand and head together."

SAY: "When your hand touches your forehead and you give me a nod — Deep Sleep." [Snap.]

PHS: "Each and every time I suggest the words Deep Sleep to you, for the purpose of hypnosis and with your permission, you will enter this state of hypnosis very quickly, calmly, and deeply, and the physical body will relax."

RECORD: PHS re-entry time: ___ seconds (compare to S2a: ___)

STEP 3: DEEPENING

5 MIN

SAY: "Hand down. Five — going down. Four — releasing. Three — deeper. Two — approaching delta. One — delta territory. Zero — Deep Sleep." [Snap.]

PHS: Full PHS.

SAY: "Open your eyes." [Wait 2 sec.] "Deep Sleep." [Snap.] "Twice as deep."

SAY: "Open your eyes." [Wait 2 sec.] "Deep Sleep." [Snap.] "Twice as deep."

PHS: Full PHS.

Only 2 reactional cycles — save time for installations.

STEP 4: DEPTH DIAL REINFORCEMENT

3 MIN

START RECORDING HERE.

SAY: "Return to the Depth Dial. You installed it last session. It is still there. Feel the brass under your fingers."

SAY: "Turn it now. Surface at 8 hertz. [Pause.] The busy mind. [Pause.]"

SAY: "Shallow at 6. [Pause.] Thoughts slowing. [Pause.]"

SAY: "Medium at 4. [Pause.] Noise fading. [Pause.]"

SAY: "Light at 2. [Pause.] Almost quiet. [Pause.]"

SAY: "Deep at 1. [Pause.] Still. Heavy. [Pause.]"

SAY: "And Delta Lock at 0.5. [Pause.] Click. [Pause.] Locked. [Long pause.]"

SAY: "Subconscious mind, when the dial clicks to Delta Lock, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

STEP 5A: SORTING ROOM

5 MIN

SAY: "You step through a doorway into a warm, quiet room. Wood panels. Amber light. The smell of old books and leather. This is the Sorting Room."

SAY: "Gentle librarians work silently. Your subconscious processing team."

SAY: "One carries today's new faces to the Face Gallery. Tomorrow, recognition is instant."

SAY: "Another carries new words to the Language Wing. Tomorrow, the words come easier."

SAY: "A third carries routes to the Map Room. Tomorrow, the city feels more like home."

SAY: "All of this happens silently. Below awareness. The librarians work best when you are deeply asleep."

SAY: "Subconscious mind, when the Sorting Room is fully operational and the librarians are at their stations, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

STEP 5B: SETTLING POND

5 MIN

SAY: "The Sorting Room opens to a courtyard. In the center, a perfectly still pond. The water is clear, illuminated by soft moonlight."

SAY: "All the impressions of the day — faces, conversations, new flavors, street sounds — are like particles of gold dust stirred up in this water. Right now, the water is swirling."

SAY: "Watch. You do not force anything. You do not fight the thoughts. You do not push them away. You simply stop stirring. And gravity does the rest."

SAY: "The particles settle. Slowly. Gently. Each finding its place at the bottom. Not lost. Perfectly preserved. Just settled."

SAY: "The water grows clearer with each breath. The surface becomes glass-smooth. Reflecting only the moon."

SAY: "Subconscious mind, when the Settling Pond is established and the particles are settling, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

STEP 5C: ISLAND CABIN

5 MIN

SAY: "The pond opens to a shoreline. You are on a private island. Warm air. Gentle waves. Palm trees swaying."

SAY: "Walk along the beach. Feel the warm sand under your feet. Each step is solid, grounded, real."

SAY: "Ahead, a cabin. YOUR cabin. Walk inside."

SAY: "Cedar and clean ocean air. Ceiling fan turning slowly. The bed is perfect — firm mattress, cool sheets, weighted blanket. Fifteen pounds pressing you into the mattress."

SAY: "Lie down. Pull the blanket over you. Feel its weight. Secure. Protected. Held."

SAY: "Listen to the waves. Notice your breathing synchronizes with them. In with the wave. Out as it recedes. The rhythm IS your sleep rhythm now."

SAY: "Every cell regenerating. Growth hormone flowing. Glymphatic system flushing."

SAY: "And notice your throat. [Pause.] The muscles in the back of your throat are holding firm. [Pause.] Your brain has a job while you sleep, and that job is to monitor your breathing. [Pause.] From this point forward, your brain sends your body the proper signals — the signals that keep your airway open, relaxed, and clear. [Pause.]"

SAY: "Your airway stays open all through the night. [Pause.] The breath moves through your throat easily and effortlessly. [Pause.] Smooth. Continuous. [Pause.] Your lungs are healthy and strong. [Pause.] You breathe deeply and clearly all night long. [Pause.]"

SAY: "And if at any point during the night your subconscious detects any narrowing — any resistance in the airway — it corrects instantly. [Pause.] The throat muscles firm up. [Pause.] The jaw adjusts. [Pause.] The tongue moves to the ridge. [Pause.] The airway reopens. [Pause.] All of this happens below awareness. Automatically. Your brain is the monitor. The airway is the channel. And the channel stays open. [Pause.]"

SAY: "Your jaw rests closed. [Pause.] Your tongue sits naturally on the ridge behind your upper teeth. [Pause.] You breathe in through your nose. [Pause.] The air is cool and clean as it enters. [Pause.] It flows up through your nostrils — those tiny hairs filtering, purifying. [Pause.] Down through your open throat. [Pause.] Deep into your lungs. [Pause.] And with every nasal breath, the vagus nerve activates. [Pause.] Parasympathetic. Recovery. Restoration. [Pause.]"

SAY: "And the rhythm of the waves outside the cabin matches your breathing now. [Pause.] Wave in, breath in. [Pause.] Wave out, breath out. [Pause.] Slow. Deep. Nasal. [Pause.] The ocean breathes with you. [Pause.] And this rhythm continues all night. Automatically. Without effort. [Pause.]"

SAY: "Subconscious mind, when the Island Cabin is established as your permanent sleep sanctuary, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

STEP 5D: PILLOW TRIGGER (CRITICAL)

5 MIN

PRIORITY INSTALLATION. This is the anchor that ties everything to real life.

SAY: "Now the automation. Every night, from tonight forward, a simple sequence activates."

SAY: "When your head touches the pillow — and you feel the weight of your head sinking into it — that physical sensation of heaviness — the Depth Dial automatically turns to Delta Lock."

SAY: "You take your first 4-7-8 breath. Tongue on the ridge. In for four. Hold for seven. Out for eight."

SAY: "On that first exhale, the Sorting Room librarians begin their work below the floor."

SAY: "By the second breath, the Settling Pond particles are drifting down."

SAY: "By the third breath — quiet. Warm. Dark. The Island Cabin is forming around you."

SAY: "By the fourth breath — sleep. Delta. Three hours of uninterrupted deep restoration."

SAY: "And throughout those three hours, your throat stays open. The muscles hold. Your airway is clear. Nasal breathing. Steady. Unobstructed. The Delta Lock holds AND the airway holds. Both locked. Both automatic."

SAY: "This sequence runs every night. Automatically. Without effort. The pillow IS the trigger. The body does the rest."

SAY: "Subconscious mind, when the Pillow Trigger is fully installed and will activate tonight, let a nod happen."

DO: Wait for nod. This one matters most.

PHS: Full PHS.

STEP 5E: NIGHT-WAKING RESET (CRITICAL)

5 MIN

SAY: "And if you wake in the night — for any reason — the protocol is instant."

SAY: "Place your hand on your chest. Feel the warmth of your palm against your sternum."

SAY: "Take one 4-7-8 breath. In for four. Hold for seven. Out for eight."

SAY: "On the exhale, the Depth Dial resets to Delta Lock. The Settling Pond resets. The particles settle again. You drift back to delta within 60 seconds."

SAY: "You do not check the phone. You do not look at the clock. You do not think about anything. The hand. The breath. The dial. Back to delta."

SAY: "Subconscious mind, when the Night-Waking Reset is installed, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

STEP 6: COUNT OUT

3 MIN

SAY: "Zero — sealing in every installation. [Long pause.] The Depth Dial at Delta Lock. The Sorting Room. The Settling Pond. The Island Cabin. The Pillow Trigger. The Night-Waking Reset. Six installations. All permanent. All automatic."

SAY: "One — slowly coming up."

SAY: "Two — physically aware. Mentally alert."

SAY: "Three — coming up higher. Tonight, every installation activates for the first time."

SAY: "Four — eyes beginning to open."

SAY: "Five — EYES OPEN. WIDE AWAKE. 1-2-3-4-5 eyes open, wide awake."

STOP RECORDING.

STEP 7: PHS VERIFY

2 MIN

SAY: "Welcome back. How do you feel?"

DO: Give him 30 seconds.

SAY: "Let's test. Raise your arm. Palm facing you. Middle finger. Breathe. Fingers separating. Hand toward face. When it touches — nod. Deep Sleep." [Snap.]

DO: TIME IT. Compare to Step 2 re-entry.

RECORD: PHS verify time: ___ sec. Induction was: ___ sec. Faster? Y/N.

SAY: "Good. Count out: 1-2-3-4-5 eyes open, wide awake."

SAY: "The PHS is installed and getting faster every session."

STEP 8: HOMEWORK + CLOSE

5 MIN

SAY: "Your nightly ritual, starting tonight:"

SAY: "10:00 PM — Journaling. Analysis, prediction, plan of record."

SAY: "10:15 — Close the journal."

SAY: "10:20 — Tension release. Fists, shoulders, face. Fifteen seconds."

SAY: "10:25 — In bed. 4-7-8 breathing, three cycles. While you breathe, turn the Depth Dial down to Delta Lock."

SAY: "10:30 — Head on pillow. The Pillow Trigger activates. Four breaths to delta."

SAY: "If you wake — hand on chest, one 4-7-8, dial resets. Back to delta in 60 seconds."

SAY: "I am giving you the recording from today's session. Listen to it in bed at least once before our next session."

SAY: "Track every 3-4 days. How you feel waking up. Not what the app says."

ASK: "Questions?"

SAY: "Session 2c will complete the remaining installations — the Time Anchor, Venting Dreams, Environmental Shield, and I will teach you self-hypnosis. One to two weeks. What works?"

RECORD: S2c scheduled: ____/____/____ at _____

DO: Share updated bedside card (S2a-Sleep-Ritual-Card) + AVS. Send recording.

POST-SESSION CHECKLIST

RECORD: PHS re-entry: ___ sec. PHS verify: ___ sec.

RECORD: Ideomotor nods — Sorting Room: strong/weak/none. Settling Pond: ___. Island Cabin: ___. Pillow Trigger: ___. Night-Waking Reset: ___.

RECORD: Sleep since S2a: ___/10. Tracking data: ___

RECORD: Tension release practiced: Y/N. Depth Dial practiced: Y/N. Journaling: Y/N.

DO: Write SOAP notes.

DO: Update DS-001.json with S2b session data.

DO: Save recording. Send to Deepak.

DO: Generate updated AVS.

DO: Log CCH hours to HMI.

DO: Note which installations got strong nods — reinforce weak ones in S2c.
