WHAT WE COVERED

This was our intake and assessment session. We accomplished four things:

- Your story:** You shared what brought you here — the experiences from childhood, the anxiety, the hypervigilance, the difficulty trusting and letting go. Thank you for your openness. That takes real courage, especially with someone new.
- Suggestibility assessment:** We ran a 36-question test to understand how your mind processes information. You scored 69% Emotional, which means your subconscious responds best to imagery, metaphors, and indirect suggestion. This is a strength — your mind is naturally creative in how it processes therapeutic work. All future sessions will be tailored to this style.
- How your mind works:** We discussed the Theory of Mind — the 88% (subconscious) vs 12% (conscious), how early experiences create automatic patterns, and how hypnotherapy works differently from talk therapy by adding an experiential layer to the insight you already have.
- EFT tapping + relaxation:** We introduced Emotional Freedom Technique (tapping) and worked through acceptance statements for shame, fear, and anger. We also practiced guided relaxation and deep breathing. These are tools you can use between sessions.

WHAT WE LEARNED ABOUT YOUR PROCESSING STYLE

Your profile:	69% Emotional / 31% Physical
What this means:	Your subconscious responds to imagery, metaphors, and gentle suggestion rather than direct commands. When we work together in trance, I will offer possibilities ("you may notice a sense of warmth...") and your mind will fill in what is right for you. This is how your brain processes change most effectively.
Your strength:	Your mind is naturally creative and will customize the therapeutic experience to what you need. You do not need to "make" anything happen — you allow it.

TREATMENT PLAN OVERVIEW

Total sessions:	6-8 (we will reassess as we go)
Frequency:	Every 1-2 weeks
Approach:	Emotional-lane hypnotherapy (imagery + metaphor), EFT integration, guided self-regulation

#	FOCUS	STATUS
1	Assessment + intake + suggestibility + EFT introduction	Completed
2a	Formal induction + safe space + process past experiences + create new positive images	Next session
2b	Rewire specific triggers + grounding anchor + reinforcement	Following session
3	Self-esteem + confidence deepening	Upcoming
4	Trust + assertiveness + boundaries	Upcoming
5	Integration + self-hypnosis independence	Upcoming
6	Graduation + relapse prevention	Upcoming

WHAT HAPPENS IN SESSION 2A (NEXT SESSION)

Session 2a is where the deeper work begins. Here is what to expect:

- We will start with a brief check-in and collect some baseline measurements (how you feel about different areas of your life on a 1-10 scale)
- I will guide you into a deeply relaxed state using techniques tailored to your Emotional suggestibility profile
- We will build a **safe space** in your mind — a place you design that belongs only to you, where you feel completely secure
- From that safe space, we will begin processing past experiences — not by reliving them, but by viewing them from your adult perspective and creating new, healthier associations

- We will create vivid images of how you **want** to feel — the loved, joyful, confident version of yourself — and anchor those feelings using the positive experiences you share with me beforehand
- This session will be **recorded** so you can listen to the therapeutic portion between sessions for reinforcement

YOUR HOMEWORK BEFORE SESSION 2A

Please complete these before our next session:

1. Email me positive experiences and imagery

Think about times in your life when you felt genuinely good — loved, joyful, safe, proud, peaceful. Even small moments count. A specific memory is best: who was there, what you saw, what you heard, what you felt in your body. Send me 2-3 of these by email. I will use your own positive imagery in our next session to build new associations. The more specific and sensory the memory, the more powerful it becomes as a therapeutic tool.

Email to: jeeth@vrishihypno.com

2. Practice the EFT tapping (2-3 times this week)

When you notice anxiety or hypervigilance showing up, try the tapping we practiced:

- Tap the side of your hand and say: "Even though I feel [name the feeling], I deeply and completely accept myself"
- Tap through the points (eyebrow, side of eye, under eye, under nose, chin, collarbone, under arm, top of head)
- With each point, acknowledge the feeling without judgment
- Finish with a deep breath

You do not need to do this perfectly. The act of acknowledging the feeling while tapping is what matters.

3. Practice the deep breathing (daily, 1-2 minutes)

The breathing we practiced at the end of session:

- Breathe in slowly through your nose (4 counts)
- Hold (4 counts)
- Exhale slowly through your mouth (6-8 counts)
- Repeat 3-5 times

Best done in the morning or before bed. This trains your nervous system to shift from alert mode to rest mode.

4. Notice your self-talk

This week, pay attention to how you talk to yourself — especially when you make a mistake or feel frustrated. You do not need to change it yet. Just notice. Are you saying "you're so stupid" or "it's okay, take a deep breath, you've got this"? Which one would you say to your best friend? Just notice the difference. We will work with this in our sessions.

5. Think about this question (no need to answer yet)

"If the anxiety and hypervigilance were a protection system that kept you safe when you were younger — and they did their job — what would it look like to turn the volume down from 10 to 2 or 3? Not off. Just down to a level that matches your life right now."

WHAT YOU CAN EXPECT THIS WEEK

- You may notice moments of **unexpected calm** — brief moments where the usual tension is just a little lower. When those happen, notice them without analyzing. Each one is evidence that the process is working.
- You may have **vivid dreams** this week. This is your subconscious processing what we discussed. Allow the dreams. They are not problems — they are processing.
- You may feel **more emotional than usual** for a day or two. Opening up about difficult experiences can temporarily bring feelings closer to the surface. This is normal and will settle. Use the breathing and tapping if it feels intense.
- You may also feel **lighter** — like you set something down that you have been carrying for a long time. That is also the process working.

NEXT SESSION

Session 2a:	The first deep-dive session. Formal induction, safe space, processing, new imagery.
Schedule at:	calendly.com/jeeth-vrishihypno/90min
Duration:	90 minutes
Before session:	Email your positive experiences/imagery. Complete homework above.

Between sessions: If anything feels overwhelming — a memory surfaces unexpectedly, emotions feel too intense, or you are struggling — you have three options: (1) Use the breathing and tapping. (2) Email me at jeeth@vrishihypno.com — I will respond within 24 hours. (3) If it is urgent, call or text **988** (Suicide & Crisis Lifeline, 24/7). You are not alone in this process.

KEY TAKEAWAYS FROM SESSION 1

- Your anxiety, hypervigilance, and trust difficulties are **not character flaws**. They are protective patterns your brain created when you were young because it needed to. They did their job. Now we are going to help your system recalibrate to match your actual life today.
- The therapy you did before gave you **genuine insight**. We are not replacing that work. We are building on it by adding an experiential layer — helping the subconscious catch up with what the conscious mind already knows.
- Your 69% Emotional profile means your mind is **naturally creative** in processing change. You do not need to force anything. In trance, your subconscious will customize the experience to what you need.
- You showed real courage today. The depth of what you shared tells me your mind is **ready for this work**.
