SESSION 3 RUNBOOK: WEIGHT MANAGEMENT PIVOT

DS-001 (Deepak S., 56, 76% Physical) | Date: Oct 22, 2026 | 4:30 PM PST | Zoom | **THERAPIST ONLY**

GATE CHECK: Recording software ready? START RECORDING at Step 6 (therapeutic suggestions). RECORD. Sleep system is installed — this session pivots to WEIGHT MANAGEMENT as primary.

STEP 1: SLEEP CHECK-IN + TRANSITION

10 MIN

S2b (Oct 15): Pillow Trigger + Night-Waking Reset installed. Breakthrough night: onset 15 min, refreshed, SpO2 98%. Check if gains held over the week. Keep this brief — max 10 min. The sleep is the foundation; weight is today's work.

ASK: "Deepak, welcome back. How has sleep been since our last session?"

ASK: "Is the Pillow Trigger holding? When your head hits the pillow, is the Depth Dial turning itself down?"

ASK: "Night-waking — if you woke up, did you use the hand-on-chest reset? How fast back to sleep?"

ASK: "Morning restedness — 1 to 10?"

RECORD: Sleep: morning restedness ___/10. Onset: ___ min. Pillow Trigger: auto/manual. Night-wake: ___. Ritual compliance: full/partial/none.

SAY: "Good. The sleep system is installed and running. The Depth Dial holds. The Pillow Trigger fires. The ritual is becoming automatic. That is the foundation."

SAY: "Now we shift focus. The sleep system stays on — it runs in the background. Today we address the weight. You told me last session it is connected. It is."

SAY: "The sleep apnea and the weight are locked in a catch-22. The apnea disrupts your hunger hormones — cortisol up, ghrelin up, leptin down. That makes weight loss biologically harder. But weight loss would reduce the throat tissue and improve the apnea. We break the cycle from the behavioral side."

SAY: "Your body is doing 3 hours of exercise and 12,000 steps. The effort is there. The issue is not effort. The issue is what happens between meals. That is what we reprogram today."

STEP 2: WEIGHT MANAGEMENT INTAKE

15 MIN

L.O.V.E. intake: Listen, Observe, Validate, Explore. Physical lane = direct, concrete questions. Get the data: WHEN, WHERE, WHAT, WHY of overeating. Map the timeline. Identify the emotional triggers.

SAY: "Now I need to understand the eating. Not what you eat — how you eat. The pattern, the timing, the triggers."

ASK: "Walk me through a typical day of eating. Start from when you wake up. What, when, where?"

RECORD: Breakfast: ___. Lunch: ___. Dinner: ___. Snacks: ___. Late-night: ___.

ASK: "When you overeat, is it at meals or between meals or both?"

ASK: "When you overeat, are you hungry? Or is something else driving it?"

ASK: "What emotions are present when you reach for food outside of meals? Think about the last time."

ASK: "Is there a time of day when the overeating is worst?"

ASK: "What role does food play beyond nutrition? Comfort? Reward? Social connection? Boredom filler?"

ASK: "Have you tried diets before? What happened?"

ASK: "Hardest question. If you could never change your weight but could change your relationship with food — no guilt, no shame, no cycle — what would that look like?"

RECORD: Primary triggers: ___. Worst time of day: ___. Pattern type: emotional/habitual/social/reward/boredom. Diet history: ___. Relationship goal: ___.

SAY: "Here is what I am hearing. The machine is running 3 hours of exercise, 12K steps. The effort is there. The issue is the fuel management system. Too much fuel, wrong timing. And it is not a knowledge problem. The subconscious runs a program that overrides the knowledge. That program was installed a long time ago. That is what we change today."

STEP 3: SMART BASELINES FOR WEIGHT

5 MIN

SUBJECTIVE only. No scale numbers. No calorie counts. No biometric targets. HMI rule: therapist cannot commit to measurable weight loss outcomes.

SAY: "Before trance, six baselines. All 1-to-10 scales. Be honest."

ASK: "Control over eating decisions — 1 is no control, 10 is full control?"

RECORD: Control: ___/10

ASK: "Awareness of when you are actually hungry vs eating for other reasons — 1 is no awareness, 10 is always know?"

RECORD: Awareness: ___/10

ASK: "Ability to stop eating when satisfied — not full, satisfied — 1 is never, 10 is always?"

RECORD: Stop at satisfied: ___/10

ASK: "Emotional eating frequency — 1 is rarely, 10 is most meals driven by emotion?"

RECORD: Emotional freq: ___/10

ASK: "Late-night or stress eating — 1 is never, 10 is every night?"

RECORD: Late-night: ___/10

ASK: "Confidence in your ability to change eating patterns — 1 is no confidence, 10 is certain?"

RECORD: Confidence: ___/10

SAY: "Good. Recorded. We check these again in 2-3 sessions."

STEP 4: EDUCATION — HOW EMOTIONAL EATING WORKS

10 MIN

Theory of Mind for eating. 88/12 split. Physical lane: machine/firmware metaphors. Direct. No hedging.

SAY: "Same 88/12 model as sleep. Your conscious mind — the 12% — knows what to do. Eat less. Stop at enough. But the subconscious — the 88% — runs a program installed years ago."

SAY: "At some point your brain learned: food changes how you feel. Stressed? Eat. Feel better. Repeat. That is automatic now. It fires before the conscious mind can say no."

SAY: "Food triggers dopamine and serotonin. Your stomach produces most of the body's serotonin. Eating literally changes your brain chemistry. Temporarily."

SAY: "Then the crash. Guilt. Shame. More stress. Which triggers more eating. The cycle reinforces itself."

SAY: "Willpower — the 12% — can hold for days, maybe weeks. The 88% always wins the war of attrition. Every diet fails because you are using 12% against 88%. We do not fight the subconscious. We reprogram it."

SAY: "Right now the pattern is: trigger, eat. No gap. What we install today is a PAUSE. Trigger, PAUSE, choose, act. In the pause you ask: am I hungry, or feeding something else? If hungry — eat, no guilt. If something else — breathe, thumb and finger, 90 seconds, craving passes."

SAY: "Your body is a machine. High-performance engine. But the fuel management system has a firmware bug. The 'enough' sensor is being overridden by a 'comfort' subroutine. We are not changing the machine. We are updating the firmware."

STEP 5: INDUCTION

5 MIN

DO: Start timer NOW.

SAY: "Close your eyes. Deep breath. Let it out."

SAY: "Raise your arm. Palm in front of your face. Stare at your middle finger. Fingers separating. Wider and wider. Hand moving toward your forehead. Magnetic pull."

SAY: "When your hand touches your forehead and you give me a nod — Deep Sleep." [Snap.]

PHS: "Each and every time I suggest the words Deep Sleep to you, for the purpose of hypnosis and with your permission, you will enter this state of hypnosis very quickly, calmly, and deeply, and the physical body will relax."

RECORD: PHS re-entry time: ___ seconds (compare to S2b: ___)

SAY: "Hand down. Five — going down. Four — releasing. Three — deeper. Two — approaching delta. One — delta territory. Zero — Deep Sleep." [Snap.]

PHS: Full PHS.

SAY: "Open your eyes." [Wait 2 sec.] "Deep Sleep." [Snap.] "Twice as deep."

PHS: Full PHS.

SAY: "Open your eyes." [Wait 2 sec.] "Deep Sleep." [Snap.] "Twice as deep."

PHS: Full PHS.

Brief progressive: head to toe, 30 seconds. He is deep fast now.

SAY: "Wave of relaxation from the top of your head. Down your forehead. Eyes. Jaw. Shoulders drop. Arms heavy. Hands warm. Chest. Stomach. Hips. Legs. Feet. Every muscle released."

STEP 6: THERAPEUTIC SUGGESTIONS — WEIGHT MANAGEMENT

15 MIN

START RECORDING HERE. Everything from here through Step 8 count out goes to the client.

6a: EMOTIONAL PAUSE INSTALLATION

SAY: "From this moment forward, every time you reach for food outside of a scheduled meal, a pause activates. Automatic. Like a circuit breaker."

SAY: "In that pause, one question rises: Am I hungry? Or am I feeding something else?"

SAY: "If hungry — eat. Enjoy it. No guilt."

SAY: "If something else — the pause holds. You take one 4-7-8 breath. You press your thumb and index finger together. That pressure is the anchor. Same calming signal as the Night-Waking Reset."

SAY: "The craving passes in 90 seconds. Every time. The thumb and finger hold. The breath holds. The craving dissolves."

SAY: "Subconscious mind, when the Emotional Pause is fully installed, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

6b: PORTION AWARENESS

SAY: "Your stomach has a signal. It fires when you have had enough. Not full, not stuffed — just enough. Satisfied."

SAY: "From this moment forward, you hear that signal clearly. It is loud. Unmistakable."

SAY: "When the signal fires, your hand puts down the fork. Automatically. Without willpower. The signal IS the instruction."

SAY: "Subconscious mind, when the portion awareness signal is restored, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

6c: FOOD AS FUEL

SAY: "Food is fuel for the machine. Premium fuel. Your body deserves premium."

SAY: "From this moment forward, you eat with awareness. You taste each bite. You chew slowly. You give your body time to register."

SAY: "The dopamine comes from the quality of the experience, not the quantity. One aware bite equals ten autopilot bites."

SAY: "Subconscious mind, when food is registered as fuel and awareness is the default, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

6d: LATE-NIGHT / STRESS EATING REDIRECT

SAY: "After 7 PM, the kitchen closes. Not because you are forbidden. Because your body does not need fuel at that hour. It needs rest."

SAY: "You already proved this. The breakthrough night — no food after 7 PM. That was the machine running correctly."

SAY: "When the late-night craving appears, it is not hunger. It is the old pattern. And you know what to do: pause, thumb and finger, one 4-7-8 breath, Depth Dial one notch toward sleep. Ninety seconds. The craving dies."

SAY: "Within two weeks, the pulse barely registers. The kitchen closes at seven and it feels natural."

SAY: "Subconscious mind, when the late-night redirect is installed and the kitchen closes at 7 PM, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

6e: WEIGHT-SLEEP POSITIVE SPIRAL

SAY: "As the weight releases, the throat tissue reduces. The airway opens. The breathing eases. The snoring decreases. The deep sleep deepens."

SAY: "Each pound lost is a gift to your sleep. Each night of deeper sleep is a gift to your weight. The catch-22 reverses. The negative spiral becomes a positive spiral."

SAY: "It has already started. The sleep is installed. Tonight, the weight system joins. Two engines. The spiral begins."

SAY: "Subconscious mind, when the weight-sleep positive spiral is activated, let a nod happen."

DO: Wait for nod.

PHS: Full PHS.

STEP 7: SLEEP MAINTENANCE REINFORCEMENT

3 MIN

SAY: "Quick reinforcement. The Pillow Trigger fires every night. Head on pillow, Depth Dial to Delta Lock, four breaths to delta. Sorting Room, Settling Pond, Island Cabin — all running."

SAY: "Night-Waking Reset holds. Hand on chest, one 4-7-8, back to delta in 60 seconds."

SAY: "Airway stays open. Throat muscles hold. Nasal breathing. Steady."

SAY: "No food after 7 means the digestive system is quiet when you lie down. Sleep is deeper because the weight system is aligned."

STEP 8: COUNT OUT

3 MIN

SAY: "Zero — sealing in every suggestion. The Emotional Pause. Portion awareness. Food as fuel. Kitchen closes at seven. Weight-sleep spiral activated. Sleep system continues. All permanent. All automatic."

SAY: "One — slowly coming up."

SAY: "Two — physically aware. Mentally alert."

SAY: "Three — coming up higher. Tonight, two systems running together."

SAY: "Four — eyes beginning to open."

SAY: "Five — EYES OPEN. WIDE AWAKE. 1-2-3-4-5 eyes open, wide awake."

STOP RECORDING.

STEP 9: PHS VERIFY

2 MIN

SAY: "Welcome back. How do you feel?"

DO: Give him 30 seconds.

SAY: "Let us test. Raise your arm. Palm facing you. Middle finger. Breathe. Fingers separating. Hand toward face. When it touches — nod. Deep Sleep." [Snap.]

DO: TIME IT. Compare to Step 5 re-entry.

RECORD: PHS verify time: ___ sec. Induction was: ___ sec. Faster? Y/N.

SAY: "Good. Count out: 1-2-3-4-5 eyes open, wide awake."

SAY: "The PHS is holding strong."

STEP 10: HOMEWORK + CLOSE

5 MIN

SAY: "Five homework items for weight. All simple."

SAY: "One — Food journal. Every day. What you eat, when, and WHY. Hungry vs stress vs habit vs reward vs boredom. No judgment. Just observe."

SAY: "Two — Emotional Pause practice. When you reach for food between meals, pause. Ask: hungry or feeding something else? If something else: thumb and finger, 4-7-8, wait 90 seconds."

SAY: "Three — No food after 7 PM. Kitchen closes. If craving hits, use the pause."

SAY: "Four — Craving protocol any time: 4-7-8 breath + thumb/finger anchor. 90 seconds."

SAY: "Five — Eat slowly one meal per day. Fork down between bites. Notice the satisfied signal. Stop there."

SAY: "Sleep ritual continues. Same stack. 10 PM journal, 10:15 close, 10:20 tension release, 10:25 bed + 4-7-8 + Depth Dial, 10:30 Pillow Trigger. Night-wake: hand on chest, one breath, delta."

SAY: "You are in San Jose first week of November. Session 4 after you are back. Second week of November."

ASK: "What day works for Session 4?"

RECORD: S4 scheduled: ____/____/____ at _____

SAY: "I will send the recording. Listen once in bed. The food journal is the most important homework this week. The data you collect tells me exactly what we target in Session 4."

DO: Send recording. Send S3 feedback form (sleep + weight version). Send updated AVS.

POST-SESSION CHECKLIST

RECORD: PHS re-entry: ___ sec. PHS verify: ___ sec.

RECORD: Ideomotor nods — Emotional Pause: strong/weak/none. Portion Awareness: ___. Food as Fuel: ___. Late-Night Redirect: ___. Weight-Sleep Spiral: ___.

RECORD: Sleep since S2b: restedness ___/10. Onset ___ min. Pillow Trigger: ___. Night-Wake: ___.

RECORD: Weight SMART baselines: Control ___. Awareness ___. Stop-at-satisfied ___. Emotional freq ___. Late-night ___. Confidence ___.

RECORD: Emotional triggers identified: ___

RECORD: Eating pattern: ___

RECORD: Worst time of day: ___

DO: Write SOAP notes.

DO: Update DS-001.json with S3 session data.

DO: Save recording. Send to Deepak.

DO: Send S3 feedback form (sleep + weight combined).

DO: Generate updated AVS if needed.

DO: Log CCH hours to HMI.

DO: Note which installations got strong nods — reinforce weak ones in S4.
