

SESSION 2 PREP SHEET: THE INSTALLATION

DS-001 (Deepak S.) | Thu Oct 9, 6:30 PM PST | Zoom | **THERAPIST ONLY**

BEFORE SESSION STARTS: Confirm SB 577 + Recording Consent are SIGNED. If not signed, collect verbal consent on camera and note it. Do NOT record without consent.

PRE-SESSION CHECKLIST

- ☐ SB 577 + Recording Consent signed?
- ☐ Review Deepak's tracker data (past week)
- ☐ Compare to S1 baseline: 4/10 sleep, 21% Deep+REM, 79% light
- ☐ Check: did he start the 6-step pre-sleep ritual?
- ☐ Any dream journal entries?
- ☐ S2 script open on second monitor (cases . json line 1017)
- ☐ Recording software ready (start at Part 3)
- ☐ Zoom audio/video tested
- ☐ Sleep Protocol Handbook ready to share (screen or PDF)
- ☐ Timer ready for PHS re-entry measurement

TIME ALLOCATION (60 MIN)

PART	TIME	WHAT	NOTES
1	15 min	Data review + arc overview + tension-release teach	Start with data. Engineer expects metrics. Teach tension-release BEFORE trance.
2	15 min	Induction + full deepening sequence	PHS re-entry test (TIME IT), 5-0 count, hand-forehead, reactional x4, heavy/light, arm rigidity
3	5 min	Progressive relaxation + cellular regeneration	START RECORDING HERE. Delta pacing: 2-sec pauses.
4	5 min	Trophy staircase (20 steps)	Each trophy = a future achievement. Deepening with each step.
5	25 min	THE INSTALLATION (10 PHS)	Ideomotor check after EACH. Stop if responses weaken. Priority: 1-6 minimum.
6	5 min	Count out + PHS verify + homework + handbook	Finger-spread test. Assign homework. Give handbook. Offer bedtime Zoom.

THE 10 INSTALLATIONS (PRIORITY ORDER)

INSTRUCTOR: One powerful simple anchor ("sink to the bottom, heaviest place") can outperform 10 complex installations. Quality over quantity. If client fatigues, stop after #6.

#	NAME	CORE SUGGESTION	IDEOMOTOR	PRIORITY
1	Sorting Room	Librarians file faces, words, routes during delta sleep	Nod when you see the librarians	MUST
2	Depth Dial	Surface (8Hz) → DELTA LOCK (0.5Hz), permanently installed	Nod when the dial clicks to DELTA LOCK	MUST
3	Delta Floor	Brain bypasses light sleep to delta within 30 min, 3-hr lock	Nod when you feel the floor beneath you	MUST
4	Settling Pond	Day's impressions settle like gold dust in still water	Nod when the water is completely still	MUST
5	Island Cabin	Permanent healing sanctuary: cedar, ocean air, weighted blanket	Nod when you feel the blanket's weight	MUST
6	Pillow Trigger	Head on pillow + 4-7-8 = Depth Dial auto-locks to DELTA	Nod when your head sinks into the pillow	MUST
7	Night-Waking Reset	Hand on chest + one 4-7-8 = back to delta in 60 sec	Nod when you feel your hand on your chest	HIGH
8	10:30 PM Time Anchor	Nervous system begins shutdown at 10:30 automatically	Nod when you see the clock at 10:30	HIGH
9	Venting Dream Activation	Vivid dreams = system clearing backlog = proof it's working	Nod	MEDIUM
10	Tracker as Convincer	Rising deep sleep % reinforces programming (positive loop)	Nod	MEDIUM

CASE CONFERENCE REMINDERS (OCT 3)

Instructor Feedback

- One powerful anchor** > 10 complex installations
- Fish at bottom of ocean:** safest, deepest part. Simple. Physical. Powerful. (Bruce)
- Miniature golf:** sequential onset/night-wake technique (mundane + sequential displaces worry)
- Reframe tracking:** every 3-4 days, not daily. "How you feel > what the app says"
- Offer 5-min bedtime Zoom** at 10:45 PM for first week. Guide settling + Depth Dial in real sleep environment.

Bruce Feedback

- Buckshot approach:** over-deliver sleep suggestions. Monitor which land for THIS client.
- Reverse induction:** if Deepak obsesses over tracker stats, convert checking-anxiety into a deepening trigger. Every glance reinforces deeper sleep.
- Wearables ≠ primary metric.** Tracking can HINDER improvement if client fixates. Trust the process.

PHYSICAL LANE REMINDERS

76% Physical: Direct. Literal. Specific. No "you may notice" — use "you ARE." No permissive softness. Kinesthetic anchors: weight, temperature, muscle release. Every PHS ends with "each and every time... for the purpose of hypnosis, with your permission, quickly, calmly, deeply, and the physical body relaxes."

DEEPENING SEQUENCE (PART 2)

- 1. **PHS Re-Hypnosis Test** — finger-spread, TIME IT (compare to S1 baseline)
- 2. **5-0 Count** — deeper than last session, body remembers the path
- 3. **Hand-to-Forehead Challenge** — marble press, brief test
- 4. **Reactional x4** — open eyes, Deep Sleep [snap], twice as deep
- 5. **Heavy/Light** — sand bag on palm, helium balloons on thumb
- 6. **Arm Rigidity** — steel bar, challenge, release into Deep Sleep

END OF SESSION CHECKLIST

- ☐ Count out: energetic, crisp 1-2-3-4-5
- ☐ Finger-spread PHS verify (do every session)
- ☐ Report PHS re-entry time improvement to Deepak
- ☐ **Stop recording** after Part 5
- ☐ Assign updated pre-sleep ritual (6 steps)
- ☐ Give Sleep Protocol Handbook (printable PDF or share screen)
- ☐ Offer 5-min bedtime Zoom for first week (10:45 PM)
- ☐ Schedule Session 3 (1-2 weeks out)
- ☐ Generate AVS after session: `python scripts/generate_client_docs.py data/clients/DS-001.json`

HOMEWORK TO ASSIGN

#	PRE-SLEEP RITUAL STEP	WHEN
1	Processing journaling (Wishful Thinking Stage)	10:00 PM
2	Precognitive journaling	10:10 PM
3	Venting with plan for next day/future	10:15 PM
4	Close the journal (ritual closure)	10:20 PM
5	Tension-release (3 groups) + breathing + progressive relaxation	10:25 PM (in bed)
6	Dream of deep peaceful sleep + self-hypnosis	10:30 PM

+ Listen to session recording (Parts 3-5) at least once before Session 3. Track sleep every 3-4 days (not daily). Dream journal: note any vivid dreams.

RED FLAGS TO WATCH

- **Fatigue risk:** Client flagged tendency to "lose or get fatigue after 4-5 sessions." Front-load impact. Build independence by S4.
- **Ideomotor weakening:** If nods slow or stop during installations, PAUSE. Save remaining for S3.
- **Tracker obsession:** If Deepak fixates on numbers, deploy reverse induction (Bruce). Reframe to subjective.
- **Sleep onset delay:** "Took awhile to fall asleep" post-S1. Pillow Trigger (#6) directly addresses this.
