MODALITY	SUGGESTIBILITY	DURATION
Zoom (Virtual)	76% Physical	~60 min

WHAT WE COVERED (SESSIONS 2A + 2B COMBINED)

Session 2 was split across two appointments to give each installation the time it deserves. Here is everything we accomplished across both sessions:

- Session 2a (Oct 9):** Installed the Depth Dial (your personal brainwave control), delivered cellular regeneration visualization, taught the physical tension release ritual, introduced the 3-stage journaling protocol, discussed nasal breathing and vagus nerve techniques, and identified new factors (sleep apnea, sugar timing, temperature sensitivity).
- Session 2b (today):** Completed all remaining installations — the Sorting Room, Settling Pond, Island Cabin, Pillow Trigger, Night-Waking Reset, 10:30 PM Time Anchor, Venting Dream Activation, Environmental Shield, and Tracker Convincer. The full system is now online.

INSTALLATIONS COMPLETE

Your subconscious now has 10 automatic programs running during sleep:		
#	INSTALLATION	WHAT IT DOES
1	Depth Dial	Brass dial that turns from Surface (8 Hz) down to Delta Lock (0.5 Hz). Controls your brainwave depth.
2	Sorting Room	Librarians file the day's faces, words, and routes while you sleep. Processing happens below awareness.
3	Settling Pond	Day's thoughts settle like gold dust in still water. You stop stirring; gravity does the rest.
4	Island Cabin	Your permanent sleep sanctuary. Cedar, ocean air, weighted blanket, waves matching your breath.
5	Pillow Trigger	Head on pillow + 4-7-8 breathing = Depth Dial locks to Delta. Four breaths to sleep.
6	Night-Waking Reset	Hand on chest + one 4-7-8 breath = back to delta in 60 seconds.
7	10:30 PM Time Anchor	Your nervous system begins shutdown automatically at 10:30 every night.
8	Venting Dreams	Vivid dreams = your brain clearing the processing backlog. Proof the hypnosis is working.
9	Environmental Shield	Temperature changes and ambient sounds no longer wake you. Delta Lock holds through environmental shifts.
10	Tracker Convincer	Checking your sleep score reinforces deeper sleep the next night. A positive feedback loop.

YOUR NIGHTLY RITUAL (UPDATED)

Six steps. Same time every night. This is the engine that runs the installations.

1. 10:00 PM — Journaling

Three parts: (1) Analysis — what happened today, dump it all on paper. (2) Prediction — what is planned for tomorrow. (3) Plan of record — anything still unresolved, write the plan to handle it. Close every loop on paper so your brain does not run loops at 2 AM.

2. 10:15 PM — Close the Journal

Physically shut it. Put the pen down. This ritual closure signals your subconscious: **processing complete. The queue is clear. Nothing more to think about tonight.**

3. 10:20 PM — Tension Release (15 seconds)

Three muscle groups:

- Fists:** Make two fists. Gather ALL tension from your day into your fists. Squeeze at 70% effort for 5 seconds. Release. Feel the flood of relaxation.
- Shoulders:** Shoulders to your ears. Squeeze 5 seconds. Drop. Feel the weight difference.
- Face:** Scrunch everything — forehead, eyes, jaw. Squeeze 5 seconds. Release. Feel the muscles flatten.

Three muscle groups. Fifteen seconds total. This is your body's shutdown signal.

4. **10:25 PM — 4-7-8 Breathing + Depth Dial (in bed)**

Tongue on the ridge behind your upper teeth. Breathe in through your nose for 4 counts. Hold for 7. Exhale through your mouth for 8. Three cycles.

While you breathe, visualize the Depth Dial turning: Surface... Shallow... Medium... Light... Deep... Delta Lock. Feel each level click. On the third exhale, the dial locks.

5. **10:30 PM — Delta Lock. Pillow Trigger. Sleep.**

The Pillow Trigger activates. First breath: Sorting Room librarians begin. Second breath: Settling Pond clears. Third breath: Island Cabin forms. Fourth breath: delta. Three hours of deep restoration.

6. **If You Wake — Night-Waking Reset**

Hand on chest. Feel your heartbeat. One 4-7-8 breath. On the exhale, the Depth Dial resets to Delta Lock. Back to delta in 60 seconds. No phone. No clock. Hand. Breath. Dial. Delta.

DEPTH DIAL PRACTICE GUIDE

Your Depth Dial has six levels. Visualize turning it slowly through each one:

LEVEL	FREQUENCY	WHAT IT FEELS LIKE
Surface	8 Hz (Beta)	Busy mind. Planning, processing, the engine idling.
Shallow	6 Hz (Alpha)	Thoughts slowing. Body beginning to settle.
Medium	4 Hz (Theta)	Noise fading. Muscles releasing. Getting quieter.
Light	2 Hz	Almost quiet. Breathing deepening. Heavy.
Deep	1 Hz	Still. Heavy. Restorative.
DELTA LOCK	0.5 Hz	Deepest frequency. Locked for 3 hours of deep restoration. Click.

Turn the dial slowly. Feel each level. When it clicks to Delta Lock, sleep begins.

Daytime practice: Once per day, close your eyes and visualize turning the Depth Dial from Surface to Delta Lock. Do not fall asleep — just practice the visualization. Three minutes. The more you practice it awake, the faster it locks at night.

TENSION RELEASE GUIDE

What was taught in Session 2a — your body's shutdown signal:

- Step 1 — Fists:** Make two fists. Gather ALL tension from your day into your fists. Squeeze at 70% effort for 5 seconds. Release. Feel the flood of relaxation wash through your hands and forearms.
- Step 2 — Shoulders:** Shoulders to your ears. Squeeze for 5 seconds. Drop. Feel the weight difference — the heaviness that was there vs. the lightness that replaces it.
- Step 3 — Face:** Scrunch your entire face — forehead, eyes, jaw. Squeeze for 5 seconds. Release. Feel the muscles flatten against the skull.

Three muscle groups. Fifteen seconds. This gives your body a clear "before and after" contrast. For a Physical suggestible like you, this muscular signal triggers sleep onset more effectively than mental techniques alone.

NIGHT-WAKING PROTOCOL

- Hand on chest.** Feel the warmth of your palm against your sternum. Feel your heartbeat.
- One 4-7-8 breath.** In for 4. Hold for 7. Out for 8.
- Depth Dial resets to DELTA LOCK.** The Settling Pond resets. Particles settle again.
- Back to delta in 60 seconds.** No phone. No clock. Hand. Breath. Dial. Delta.

Still awake after the reset? Play miniature golf in your mind. See the first hole — a simple straight shot. Green felt, the weight of the club, the tap of the ball. Play each hole. Most people are asleep by hole 5. It is mundane enough to not excite you, structured enough to displace worry, and sequential enough to occupy your engineer's brain without stimulating it.

NASAL BREATHING REMINDER

- Breathe through your nose** at night. Nasal breathing activates the vagus nerve, which triggers your parasympathetic (rest) system.

- **Jaw headband:** If you tend to breathe through your mouth or snore, the jaw headband (recommended from Session 2a) keeps your jaw closed and promotes nasal breathing throughout the night.
- **Vagus nerve reset (if needed):** Ice-cold water splashed behind your ears, or humming/OM vibrations — both stimulate the vagus nerve and shift your body toward recovery mode.

JOURNALING PROTOCOL

3-Stage Method (taught in Session 2a):

1. **Analysis:** What happened today? Dump everything — events, conversations, unfinished thoughts. Stream of consciousness. Do not filter or organize.
2. **Prediction:** What is planned for tomorrow? Meetings, tasks, decisions. Your subconscious needs to see that the conscious mind has a plan. Once it sees the plan, it stops running scenarios.
3. **Plan of Record:** Anything unresolved — frustrations, worries, open questions. Write the plan for handling each one. If there is no solution yet, write "I will address this on [specific day]." Close every loop.

Then close the journal. Physically shut it. This ritual closure signals your subconscious: processing complete. The queue is clear.

TRACKING

- **Frequency:** Every 3-4 days. Not daily. Over-tracking creates pressure. Under-tracking loses data.
- **What to track (subjective):**
 - Morning restedness: 1-10 (baseline: 4/10)
 - Sleep onset ease: Difficult to Effortless (baseline: ~35 min)
 - Night-waking: Frequent to Rare (baseline: frequent)
- **Tracker data** is for reference, not gospel. How you feel matters more than what the app says.
- Bring the data to our next session.

DREAM JOURNAL

- Keep a notepad by the bed.
- If you wake remembering a vivid dream, write 2-3 words. Just enough to capture it.
- If no dreams, write "none."
- Both are data. Vivid dreams mean the venting system is working — your brain is clearing the processing backlog.

WHAT TO EXPECT THIS WEEK

- You may experience **vivid dreams**. These are venting dreams — your brain clearing accumulated overload. They are a positive sign that the installations are active.
- You may notice the **Pillow Trigger** activating — a heaviness or drowsiness that comes on quickly when your head hits the pillow. Let it happen.
- You may find yourself **falling asleep faster** than usual. The 4-7-8 breathing + Depth Dial combination is designed to shortcut your onset time.
- You may notice **environmental sounds bothering you less** — the fan, temperature shifts, house noises. The Environmental Shield is working below awareness.
- If a night feels **no different**, that is also normal. The installations strengthen with repetition. Consistency matters more than any single night.

DIETARY AND ENVIRONMENTAL REMINDERS

- **No sugar after 4:30 PM.** Sugar late in the day disrupts your sleep architecture.
- **Temperature:** Keep your room cool. If the fan cycles bother you, consider a steady white noise source.
- **Jaw headband:** Promotes nasal breathing, reduces snoring, supports the sleep apnea management.

PROGRESS INDICATORS

HOW WE MEASURE	WHERE YOU STARTED	WHAT IMPROVEMENT LOOKS LIKE
Morning restedness	4/10 (exhausted)	7-8/10 (refreshed)
Sleep onset ease	Difficult (~35 min)	Natural, effortless
Night-waking	Frequent, hard to return	Rare, returns easily

Daytime energy	Low, persistent fatigue	Consistent throughout day
Ceremony compliance	Starting	Effortless habit
Self-hypnosis confidence	Not yet learned	8+/10 (fully independent)

Progress is measured through subjective experience and clinical observation.

TREATMENT PLAN

Sessions: 6-8
Frequency: Every 1-2 weeks
Approach: Clinical hypnotherapy, Physical suggestible lane (direct/literal)

#	FOCUS	STATUS
1	Assessment + Education + First Induction	Completed
2a	Installation (partial) — Depth Dial + cellular regeneration + tension release	Completed
2b	Installation (complete) — 9 remaining PHS anchored in deep trance	Completed
3	Maintenance + Overactive Mind	Next session
4	Independence Pivot — self-hypnosis taught	Upcoming
5	Fine-Tuning	Upcoming
6	Graduation	Upcoming

NEXT SESSION

Session 3: Maintenance + Overactive Mind. Reinforcement of installations. Address any areas that need strengthening based on your data and experience.
Schedule at: calendly.com/jeeth-vrishihypno/90min
Duration: 60-90 minutes
Before session: Bring tracking data (every 3-4 days), dream journal, and any questions.

Between sessions: If sleep deteriorates significantly or you experience persistent anxiety, panic, or suicidal thoughts — contact your primary care physician immediately. For non-urgent questions: email jeeth@vrishihypno.com (response within 24 hours). The 5-minute bedtime Zoom is available this week — text to schedule.

SESSION RECORDING

A recording of the relaxation and installation portion of today's session has been provided. Listen to it in bed at least once before Session 3. It reinforces the installations. Do the nightly ritual first; use the recording as a backup if you are still awake after Step 5.

SB 577 Disclosure: Jithendran Sellamuthu, C.MH. is not a licensed physician, psychologist, or psychiatrist. Services are provided for vocational/avocational self-improvement under CA B&P Code §2908. Not a substitute for medical/psychological treatment.

No Guarantee of Outcomes: Individual results vary based on suggestibility, compliance, and overall health. VRishi Hypnotherapy does not guarantee specific outcomes, cure rates, or timelines.

Therapeutic Exclusions: Clients on anti-depressant, anti-psychotic, or anti-anxiety medications, or with psychiatric history/suicidal ideation, must be referred to licensed mental health professionals.

Sleep Apnea Advisory: Sleep apnea was identified as a potential factor in your sleep quality. Hypnotherapy supports sleep hygiene and relaxation but does not treat sleep apnea. If symptoms persist, a sleep study referral may be recommended.

Confidentiality: All information kept confidential per HIPAA Privacy Rule (45 CFR §§160, 164) and CA law, except where disclosure required by law.
