MODALITY	SUGGESTIBILITY	DURATION
Zoom (Virtual)	**76% Physical**	**~60 min**

YOUR PROGRESS SO FAR

Breakthrough Night (Oct 14): You followed the full ritual and reported the best sleep since we started working together. Fell asleep in 15 minutes (was 35 min). Felt refreshed in the morning for the first time. SpO2 98%. This validated everything we have been building.

MEASURE	SESSION 1 (OCT 1)	BEFORE THIS SESSION	DIRECTION
Sleep onset	~35 min, difficult	**15 min**	Improved 57%
Morning restedness	4/10 (exhausted)	**Refreshed**	First time
Night-waking	1-2x	**1x (bathroom, returned immediately)**	Improved
Anxiety at night	Mind always busy	**None**	Resolved
Ritual compliance	Starting	**Full (all steps)**	100%
SpO2	Unknown	**98%**	Healthy

WHAT WE COVERED TODAY

1. **5 core sleep installations** anchored in deep trance with ideomotor confirmation:
   - **Sorting Room:** Your subconscious processing team (Face Gallery, Language Wing, Map Room) now files the day's data silently during delta sleep
   - **Settling Pond:** The day's thoughts settle like gold dust in still water. You stop stirring. Gravity does the work.
   - **Island Cabin:** Your permanent sleep sanctuary with airway support — throat muscles hold firm, nasal breathing, wave-breath synchronization
   - **Pillow Trigger:** Head on pillow + 4-7-8 breathing = Depth Dial auto-locks to Delta. Four breaths to sleep. **This is now automatic.**
   - **Night-Waking Reset:** Hand on chest + one 4-7-8 breath = back to delta in 60 seconds
2. **Mouth breathing identified** as the primary contributor to snoring. Nasal breathing is the central intervention.
3. **Left-side sleeping** recommended to improve airway clearance
4. **Body safety reprogramming:** Your body learned to avoid deep sleep because it associated deep sleep with choking risk. We reprogrammed that signal: deep sleep IS safe when you breathe nasally.
5. **Three-track approach agreed:**
   - Track 1: Sleep behavior (current — installations running, ritual established)
   - Track 2: Weight management (next session — emotional eating, stress eating patterns)
   - Track 3: CPAP retry via desensitization (future, if needed after other interventions)

WHAT'S DIFFERENT AFTER TODAY

Before today: You had to consciously remember every step of the ritual.
After today: The Pillow Trigger makes it automatic. Your head hits the pillow, four 4-7-8 breaths, and the Depth Dial locks to Delta. The Sorting Room, Settling Pond, and Island Cabin activate in sequence. You do not have to think about it. The system runs itself.

YOUR NIGHTLY PRACTICE (CONTINUE)

1. **Exercise** during the day (you're already doing this)
2. **No food after 7 PM**

3. **Shower** before bed (temperature drop triggers sleepiness)
4. **10:00 PM — Journaling** (analysis + prediction + plan of record). Close and seal the journal.
5. **10:20 PM — Tension release** (fists, shoulders, face — 15 seconds)
6. **10:25 PM — In bed.** 4-7-8 breathing x3 + Depth Dial to Delta Lock
7. **10:30 PM — Pillow Trigger activates.** Four breaths to delta. Sleep.
8. **If you wake:** Hand on chest. One 4-7-8 breath. Dial resets. Back to delta.

NEW additions from today:

- **Nasal breathing:** Close your mouth, bite teeth gently together, breathe through your nose. Practice during the day. Maintain during sleep.
- **Left-side sleeping:** Try sleeping on your left side. Better airway, reduced snoring, less acid reflux.
- **Confirm mouth breathing:** Ask your wife to observe whether you sleep with your mouth open. If yes, consider a chin strap.
- **Depth Dial daytime practice:** Once per day, close your eyes, find the dial, turn it from Surface to Delta Lock. 3 minutes. Strengthens the pathway.

HEART RATE & BLOOD PRESSURE (EDUCATIONAL CONTEXT)

We discussed the distinction between heart rate (electrical/hormonal, driven by cortisol) and blood pressure (vascular/plumbing). Your resting heart rate of 72-77 BPM (vs baseline 57) reflects chronic cortisol elevation from years of disrupted sleep — not a cardiac problem. Your BP recovery after tennis (172 → 116 in one hour) shows healthy blood vessels. As sleep improves and weight adjusts, heart rate should trend downward naturally.

NEXT SESSION: WEIGHT MANAGEMENT

Session 3 — October 22, 4:30 PM PST (Zoom)

The sleep system is installed and running. Next session we shift focus to weight management as the primary presenting issue. We will:

- Assess your eating patterns, emotional triggers, and timing
- Identify what drives the overeating (it is not lack of willpower — it is a subconscious pattern)
- Install the **Emotional Pause** — an automatic gap between trigger and eating that lets you choose consciously
- Install the **Satisfied Signal Amplifier** — turning up the volume on your body's "enough" signal
- Address the catch-22: sleep apnea disrupts hunger hormones, making weight loss biologically harder. We break the cycle from the behavioral side.

Before Session 3: Start noticing your eating patterns this week. When do you eat? Why? Hungry, or something else?

Between sessions: If sleep deteriorates or you have questions — email jeeth@vrishihypno.com. If traveling to San Jose first week of Nov, sessions will resume after your return.

SB 577 Disclosure: Jithendran Sellamuthu, C.MH. is not a licensed physician, psychologist, or psychiatrist. Services are provided for vocational/avocational self-improvement under CA Business & Professions Code §2908. Hypnotherapy is not a substitute for medical diagnosis, treatment, or psychological care.

Medical Disclaimer — Sleep Apnea: Sleep apnea is a medical condition requiring evaluation by a qualified sleep medicine physician. Breathing techniques and airway suggestions are for relaxation and self-improvement only. **Please consult your sleep specialist** before making changes to your sleep apnea management plan.

Medical Disclaimer — Heart Rate & Blood Pressure: Observations about heart rate and blood pressure are for educational context only. **Do not adjust or discontinue any prescribed medications** based on hypnotherapy sessions.

Medical Disclaimer — Weight Management: Hypnotherapy for weight management addresses behavioral and emotional patterns. It is not a medical weight loss program. **Consult your physician** before modifying any weight management approach.

Medical Disclaimer — Nasal Breathing & Sleep Position: Recommendations regarding nasal breathing and sleep position are general wellness suggestions. If you experience breathing difficulty, **consult your physician or ENT specialist**.

Scope of Practice: All medical conditions are outside the scope of hypnotherapy and are referenced solely for educational context and healthcare coordination.

No Guarantee of Outcomes: Individual results vary. Improvements reported are subjective self-reports and do not constitute medical evidence of clinical change.

Confidentiality: All information kept confidential except where disclosure is required by law.
